

You may meet first with a behavioral health provider, a medical provider, or both. We will learn more about you, review treatment options, and create an individualized treatment plan.

We work with patients, families, and schools to create supportive environments and ensure that everyone feels ready and educated before moving forward with gender-affirming medical interventions.

We can care for you until you turn 25. We will help you find healthcare providers that can continue working with you as an adult.

Support and readiness

Gender-Affirming Treatment

Continue Adult Care

Call 1-800-543-7362 to schedule a phone intake with our coordinator. Patients under 18 will need to have a parent or guardian on the phone during the phone intake. We will learn more about your needs and help you schedule an appointment with us if appropriate.

Most of our patients work with a behavioral health provider, either to provide support and therapy or to prepare for pursuing gender-affirming medical interventions. We can help you get connected with a behavioral health provider if needed.

We provide medical interventions including medications that lighten or stop periods, medications that block puberty, and hormone therapy. We also provide referrals for surgical interventions and other services.
