

Pediatric Eczema Decision Aid Research Study

What is the purpose of this study?

We want to hear your opinions on treatment options for pediatric atopic dermatitis (also known as eczema). This information will be used to create a decision aid. Decision aids help patients (and their parents/caregivers) know their treatment options. It helps patients and doctors decide together which treatment option would be the best for each individual patient.

You/Your child may be eligible if:

- Your child has active atopic dermatitis
- You can participate if your child is 3-17 years old
- Your child can participate if they are 12-17 years old

What you/your child will do:

- Participate in one 90-minute online focus group
- If your child is ages 12-17, they will also participate in a separate 90-minute focus group for children
- You will be asked questions about your thoughts about atopic dermatitis treatment options

Interested or have questions?
